

On Jan 27 We saw one old, but very large persistent slab avalanche further up Republic Creek (pictured). It was on similar aspect and elevation as a somewhat more recent persistent slab in nearby Hayden Creek, Northnortheast, 10,000'. It appeared to be 6'+ deep and 500'+ wide. The bed surface and crown had been partially drifted in, so it seemed it was probably at least a week old...? Photo: GNFAC

Advisory Region Cooke City Longitude -109.92W Latitude 44.97N

**Avalanche Details:** Old persistent slab avalanche up Republic Creek **Forecast link:** GNFAC Avalanche Forecast for Tue Jan 28, 2025
