

Loose avalanches around Blackmore

Date

Wed, 03/05/2025 - 15:00

Activity

Skiing

Saw lots of small loose avalanches on Mt Blackmore and nearby slopes, some appeared to be natural and others skier triggered. We saw multiple dry loose on N and E aspects and a wet loose on a southeast aspect.

We also noticed recent wind loading on the southeast side of ridgetops and scouring on north slopes.

Region

Northern Gallatin

Location (from list)

Mt Blackmore

Observer Name

Heather Myers
