

Thin new snow slabs

Date

Thu, 03/06/2025 - 12:00

Activity

Skiing

Toured into the emigrant gulch area today. At around 7600', I found some touchy storm slabs. These only seemed to be reactive on solar aspects (crust). Near a ridge line, the winds were coming from the east, it was weird. Socked in all day with lots of snow flying around.

Region

Out of Advisory Area

Observer Name

Jay Alford
